

Safeguard Your Business From Common Scams

90% of all cyber-attacks focus on email users. More than 50% of all targeted attacks include some form of malicious link or attachment sent via email.

Stay Alert and Aware

1

Use strong passwords for all your online accounts and change them regularly.

2

Don't click on suspicious emails or links, even if they appear to be from someone you know.

3

Avoid using public Wi-Fi unless necessary, as this can leave you more vulnerable to an attack.

4

Make sure your computer's operating system and applications are up to date with the latest security patches.

5

Regularly monitor your financial accounts for any suspicious activity.

6

Utilize two-factor authentication (2FA) on any accounts when available.

7

Attend a cybersecurity awareness training session.
